- o   What are the 3 basic technologies needed to run a website?

    An Internet Service Provider (or web host), a browser to display your web page, and a web server to publish your work are the 3 basic technologies needed to run a website.

    There are also 3 requirements: Web Hosting, Web Design, and a Domain Name.

- o   What are local files, what are web servers, what is FTP and how are they related?

    Web servers allow you to publish your work. Computers can act as web servers if they are connected to a network (ISP). FTP is a File Transfer Protocol that allows you to transfer files from one computer to another. You might want to transfer files to a computer with Internet, in which case you would use FTP to do the transfer and the web server on the computer you're transferring the files to will allow you to put them on a website using a host etc.

- o   What is AFS Space and what does it allow you to do?

    AFS (Andrew File System) is used to store and share data or web pages safely and securely.

- o   What is the URL for the web space MSU provides for you in your AFS space?

    https://msu.edu/~stokesj8/module1.pdf
